WHICH PLUGINS ARE INCLUDED?

Subscription:

Enables subscription plans for your LMS. Users will be able to purchase subscription plans and enroll on classes using them. Each subscription plan could be limited with time and subscribe count. Subscription plans don't have any conflict with the normal purchase process so you will be able to use both subscription and direct purchase at the same time.

Offline payments:

You will be able to add your bank accounts and users will see bank accounts in frontend and will be able to submit their transactions. If you approve transactions, the amount will be added to the user account.

Payment Gateways Pack:

Includes additional payment gateways such as Stripe, Paytm, Paystack, Flutterwave, Bitpay, Payfort, Iyzico, Robokassa, CashU, Midtrans, Mercadopago, Zarinpal, Mollie, N-Genius, Alipay, Authorize.net, Instamojo, Izipay, Klarna, Sslcommerz, Payku, Payhere, Paysera, Voguepay, Paylink, Toyyibpay, Jazzcash.

Quiz & Certification:

Create unlimited various quizzes with different options (Duration, Descriptive, multiple-choice & image questions, Attempts), Auto and manual correction, Automatic result calculation, Show correct answers and solutions after a quiz finished.

Create certificates with customized templates. Users will be able to validate certificates through the certificate validation page and check the certificate information.

Meeting Booking:

Instructors will be able to define their meeting timesheet and define their hourly rate. Users will be able to book meetings and reserve time slots using the calendar.

They will be able to add meeting times to Google Calendar and receive automatic reminders.

Text Courses:

Create unlimited text-based courses. Each text lesson could include videos and downloadable files in addition to text content.

SMS Authentication:

Use Twilio SMS authentication for user login and registration.

Noticeboard:

This plugin enables sending notices for admin and organizations. They will be able to post notices to instructors, students or all users and notices will be displayed on the user panel.

Bigbluebutton Integration:

Conduct unlimited live events on Bigbluebutton for free! All of the information such as URL, passwords, and permissions will be generated automatically for students and instructors.

Organizational Education:

Enables multi-organization education for your LMS. Each organization could include exclusive instructors and students.

Multi-language Content:

Define website contents in different languages. The content will be loaded according to the user language.

Affiliate & Referral Marketing:

Add more power to your platform using the affiliate marketing feature. Users will be able to sell your platform courses and earn.

SCORM Courses:

Bring interactive education experience to your platform. Publish courses made by Adobe Captive, iSpring or any other software.

Tutor Finder:

Allow users to find the best instructors according to different parameters like tutoring level, tutoring subject, meeting type (Online, In-person), meeting time and day, location on the map, age, gender. This feature includes a beautiful wizard that gets information from the student and will display the best matches.

Reward Points System:

Create a professional customer loyalty club on your website. Your users will get points according to their different activities like purchase, charging account, publishing courses, passing a quiz, certificate achievement, comments, course reviews, joining newsletter, referring users (Affiliate), getting badges, course completion, meeting reservation and engage them with your platform. Users will be able to enroll on courses using points or convert them to account charge.

In-App Live Class System:

Conduct live classes on your platform directly with awesome features like live chat, share screen, etc. Your users wont redirected to any other third-party app. Imagine a live class screen on your website… Looks Cool!

SaaS Packages:

Define different service packages and limit different features like courses, meeting time slots, live class capacity, organization instructors and students for instructors and organizations. Users should upgrade their accounts to reach more features.

Forum & Community (New in v1.6): Add a professional forum and community feature to your LMS platform. Users will be able to create new topics in different categories and communicate together about different subjects.

Course Forum (New in v1.6): Allow course students to ask their questions in the course forum. Other students and the instructor will be able to answer questions. Students can mark resolved questions as "Resolved".

Course Bundle (New in v1.6): Combine several courses as a bundle and sell them together as a bundle.

Store & Marketplace (New in v1.6): Add a multi-vendor marketplace and store feature to your platform and allow users to sell physical & virtual products.

Drip Content (New in v1.6): Restrict the student's access to the course chapters and files by different limitation parameters like time and sequence content. You can define force students to access course parts X days after purchasing the course or force them to pass the previous part.

Private Mode (New in v1.6): Do you want to run an LMS solution for internal purposes? By enabling the private mode, you can specify which users can access courses for enrollment.

Manual Enrolment (New in v1.6): Add students to courses, bundles, and products manually from the admin panel.

Assignment & Homework (New in v1.6): Define different assignments for each course with different options like grade, deadline, etc, and make the education process more effective.

Course Statistics & Analytics (New in v1.6): View course details and statistics in a graphical environment.

Course Noticeboard (New in v1.6): Send different notices to the course students in different colors.

+ All future plugins.

REQUIRMENTS

Installing these plugins requires Rocket LMS installed. You can purchase it from this link.

HOW TO INSTALL PLUGINS?

You will find all plugins in the “Plugins” folder. Each folder contains plugin files and a text file “filepath.txt”.

You should just replace the files according to the file paths provided in the text file.

Open your hosting or server file manager and navigate to the path that mentioned in the “filepath.txt” file and replace files. The plugin will be installed!

HOW TO INTEGRATE BIGBLUEBUTTON (BBB)?

Bigbluebutton is a software that helps you conduct live classes on your own server.

You should provide a BBB server first.

Get BBB URL and secret key according to this link. It is necessary for BBB integration.

You should get the above information and define them in the .env file located in the project root folder.

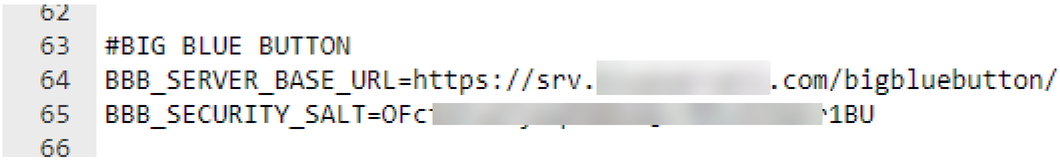
Make sure to add these parameters to the ".env" file.

#BIG BLUE BUTTON

BBB_SERVER_BASE_URL=

BBB_SECURITY_SALT=

The result should be the same as the attached image.



```
#BIG BLUE BUTTON
BBB_SERVER_BASE_URL=https://srv.[illegible].com/bigbluebutton/
BBB_SECURITY_SALT=OFc[illegible]1BU
```

HOW TO USE TWILIO SMS AUTHENTICATION?

Get the following information according to this link.

- TWILIO SID
- TWILIO AUTH TOKEN

Open the .env file in the root folder and define Twilio credentials that you got.

If the following lines are not available, please add them.

TWILIO

TWILIO_SID=

TWILIO_AUTH_TOKEN=

TWILIO_NUMBER

Now you can change the login method to the SMS Authentication from the settings menu in the admin panel.

Affiliate & Referral System

This feature allows you to activate affiliate marketing for your platform. By activating this feature, each user will have a unique referral code that other users will be able to register on the platform using this code (or URL).

There are two bonus types in the referral system:

1- Registration bonus (Fixed): Once a user registers using an affiliate code and activates their account, a fixed amount could be charged to the referred user wallet or affiliate user wallet (Or both of them).

2- Sales commission bonus (Variable): Once a sub-level user makes a purchase, a part of the transaction will be charged to the affiliate user wallet.

How to activate and manage?

You can activate this feature from Admin Panel/ Settings/ Financial/ Affiliate

If you activate this feature, the referral code input field will be displayed on the registration page and users will be able to access the related menu on the user panel.

All of the related actions will be disabled if you disable this feature.

There is another toggle button that you can control the affiliate activation for new registration. If you want to use the affiliate feature for specific users, you should turn this toggle off.

Note: You can enable/disable the affiliate feature for specific users. This feature will be useful when you want to specify your affiliate users. You can enable/disable this feature for users by editing users from the users list.

Affiliate Options:

Affiliate user commission: The percentage amount that will be charged to the affiliate user wallet when a purchase has been made by a sub-level user.

This percentage rate should be lower than the platform commission rate because the affiliate commission rate will be deducted from the platform commissions. For example: Imagine that a sub-level user purchases a course at $100 and the platform commission rate is 30%, instructor commission rate is 70% and the affiliate commission rate is 5%. The transaction amount will be divided into the following values:

- A: $70 for the instructor
- B: $25 for the platform
- C: $5 for the affiliate user

Affiliate user registration amount:

When a user registers using a referral code, this amount will be charged to the affiliate user wallet.

Referred user registration amount:

When a user registers using a referral code, this amount will be charged to the referred user wallet.

Note: Registration business will be charged to the user wallet once the account is activated. If the user doesn't activate the account, the amount won't be charged.

You can set the registration bonus for both users or one of them or none of them. It depends on the data you set.

Referral description:

This text will be displayed on the affiliate page in the users panel.

Users will be able to get their referral URL or code. They can also view their affiliate statistics on this page.

The affiliate payout process is the same as the general payout process that you can view instructions in the Rocket LMS documentation.

Multi-language

The multi-language feature helps you to create your platform content in different languages so users will be able to load content according to their selected language.

Which contents are supported?

You can define the following contents in different languages:

Courses content, Blog posts, Categories, Trend categories, Category filters, Additional pages (CMS), Footer columns, Advertising banners, User panel sidebar banner, Hero text, Subscription plans, Promotions plans, Testimonials, Certificate templates, Badges, Report reasons, Support departments, etc.

How to enable/disable this feature?

You might not be interested in providing your content in different languages so we considered this option to disable this feature. You can enable or disable this feature from the Admin Panel/ Settings/ General/ Activate multi-language.

How to specify content languages?

You can select languages when you are going to define contents. You will find a dropdown that you can select your favorite language and define content for it.

You can specify languages that display in the dropdown from the Admin Panel/ Settings/ General/ Frontend Languages List.

How to realize which languages are defined for each content?

If you define content in a specific language, it will be specified in the dropdown. E.g English (Defined).

What will happen if you don't define content in all languages?

If a content includes single language, it will be displayed in the defined language. If a user selects another language, the content will load with the language that includes a translation.

If the content includes several defined languages:

A- If the content includes the user-selected language, it will be displayed in the user-selected language.

B- If the content doesn't include the user-selected language, the content will be displayed in the platform default language (Admin Panel/ Settings/ General/ Default Front Language).

C- If the content doesn't include the website's default language and user-selected language, it will be loaded in the first language that is defined for it.

In-App live classes:

We added a new live class system that helps you to create In-App live classes. By using this system, your users won't be redirected to a third-party app (Like Zoom or BBB) for watching the live class. The class will be conducted on your website directly.

This system doesn't require any servers. It uses Agora Interactive Live Streaming API and you can use free or premium plans.

In-App live classes advantages:

- The user won't be redirected to any other service
- Live chat in class
- Share screen
- Unlimited members (No need to increase hosting resources)
- Self-hosted (No need to provide a server for it)

How to enable In-App live classes?

In order to use this system, go to the "Admin Panel/ Settings/ General/ Features Tab". There are some configurations for the API.

You can enable this system by turning on the "In-App live class" toggle button.

You might use the paid plan so if you don't want to enable this feature for free classes, you can disable the "Allow instructors to use In-App live class for free live classes" button.

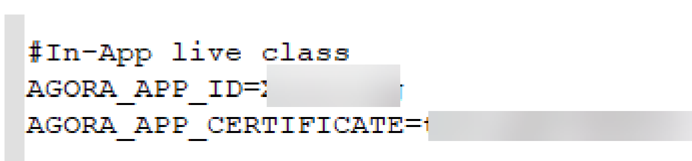
If you want to disable the In-App live class feature, you need to turn off the related button so this option won't be enabled for instructors in the live class creation process.

How to integrate the platform with Agora API?

You need to get the following credentials from Agora

- App ID
- App Certificate

You can get them according to this link. Edit the ".env" file in the project root and define these parameters like the following screenshot and save the file:



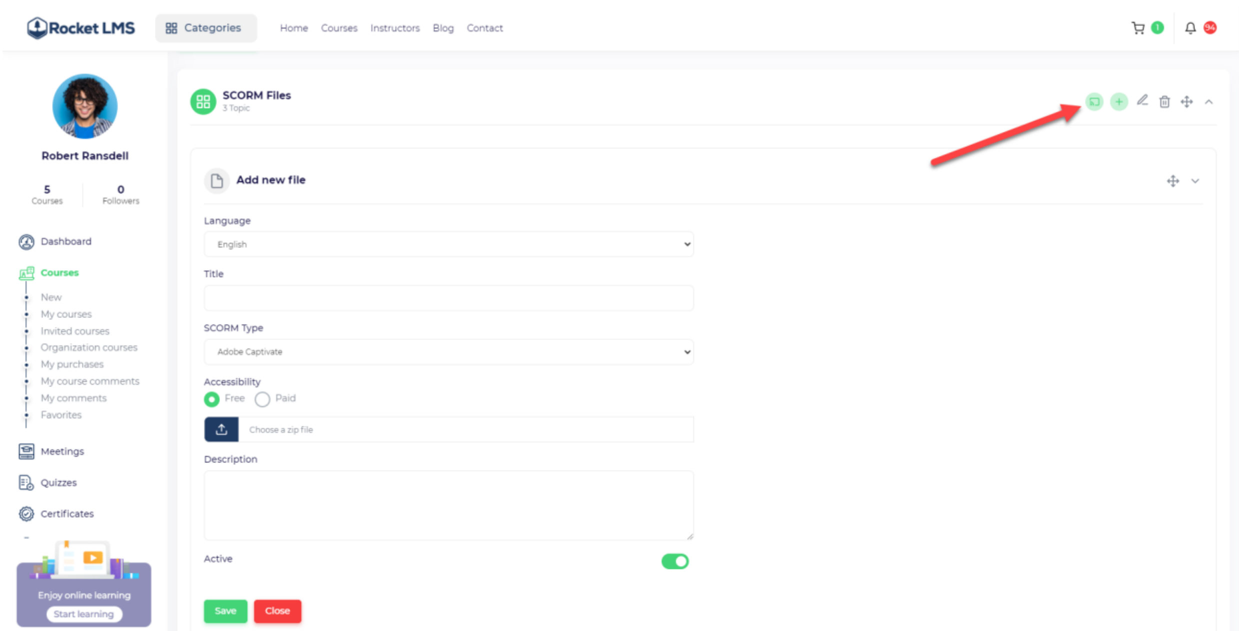
```
#In-App live class
AGORA_APP_ID=
AGORA_APP_CERTIFICATE=
```

SCORM:

Rocket LMS supports interactive SCORM courses. You can build SCORM packages using software like Adobe Captivate, iSpring, etc.

Each SCORM package should be in the ".zip" format containing an HTML file.

To use SCORM courses, click on the "New SCORM" in the "Content" tab in the course creation process.



You can select the SCORM type in the dropdown. It depends on the software you created the package with it.

If you created it with another software, you can select the "Custom" option. An additional field will be added to the form. You should check the zip file and get the main HTML file name.

Enter the main HTML file name in the related field e.g. scorm.html

SaaS Packages:

Rocket LMS includes SaaS model packages.

You can define different service packages for the instructor and organization user roles and limit their accessibilities according to the activated package. They should upgrade their service packages if they need more features.

Instructors and organizations have full access to the platform features by default.

To enable this feature, navigate to the "Admin Panel/ SaaS/ Settings/ General Tab" menu and turn on the "Active SaaS" toggle button.

After that navigate to "Admin Panel/ SaaS/ Settings/ Instructor, Organization Tabs". You will be able to enable/disable the SaaS feature for different user roles.

You can specify default values for different user roles. Users will have this access level according to the values entered in these fields without purchasing a package.

If you leave a field empty, the value will be unlimited. If you don't want to include a feature in a package, enter "0".

You can define new packages from the "Admin Panel/ SaaS/ New Package" menu.

If you want to change the default values for a specific instructor or organization, you can edit the user and change values in the "SaaS Package" tab.

Reward Points System:

This system allows you to create a professional point and rewarding system that is known as a customer club or customer loyalty program.

Users will get point rewards for their actions according to the conditions defined in the admin panel and they will be able to use points for enrolling on courses or converting points to the wallet charge.

How to enable this feature?

Go to the "Admin Panel/ Reward Points/ Settings" and activate the feature.

There are two ways for users to use earned points:

They can enroll on courses using points

They can convert points to the wallet charge

You can disable point conversion by disabling the related toggle.

How to define point rewarding conditions?

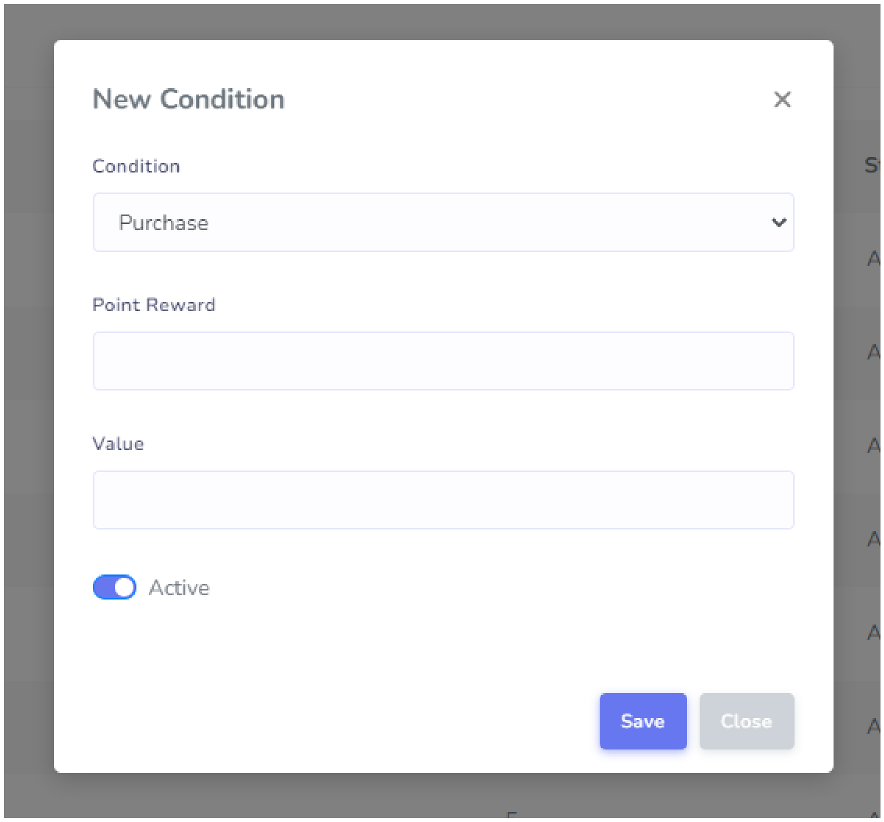
There are many ways for awarding points to users like:

- Normal Account Charge
- Conditional Account Charge
- Publishing a Course
- Making a Purchase
- Passing a Quiz
- Achieving a Certificate
- Comments
- Registration
- Course Review and Rating
- Meeting Reservation
- Joining Newsletter
- Getting a Badge
- Referring a User (Affiliate)
- Course Completion

You can define reward points conditions from the "Admin Panel/ Reward Points/ Conditions" menu.

Some of the parameters have an additional parameter "Value". This field helps you to make your conditions more complex.

For example, if you define 20 points for the purchase condition and 50 for the "Value" parameter, the user will get 20 points for each $100 purchase. (The same process for the account charge)



How do users view their points?

Users can view their available points, spent points, earned points, and point rewarding history under the "Rewards" menu in their panel.

How to specify courses for enrolling by points?

When you edit a course from the "Admin Panel", you will have an additional field that you can define points for accessing the course. If you fill this input field, the related button will be displayed on the course page and users will be able to enroll on it using points.

All of the courses that are available for purchase using the point rewarding system are available on the "Rewards" page.

Store & Marketplace:

This plugin allows the admin and vendors (Instructors & Organizations) to sell their virtual and physical products.

This feature provides a complete solution with common features like parcel tracking, commission, tax, reward points, etc.

How to configure the Store feature?

Go to the admin panel and navigate to the "Store/Settings" menu.

You can activate this feature by enabling the "Active" toggle button. By enabling this feature, all of the related menus will be displayed on the platform's front and users will be able to submit their products.

You can also define a particular commission rate for store products and use a separate tax rate.

Another customizable feature is "Product submission". You can disable creating different product types by users. There are two toggle buttons for disabling different product types; if you disable them, users won't be able to submit different product types.

Where can you find products?

All of the store products will be displayed in the "yourdomain.com/products" URL.

What is the "Tracking URL" and how to use it?

You can define a shipping tracking URL for your website. This URL will be displayed as a button for customers. This modal will be available once the seller defines a parcel tracking code for a product.

To define the shipping tracking URL, go to the admin panel and navigate to the "Store/Settings" menu and define your shipping company tracking URL.

How to create products?

You can define products from the admin panel or users can define them using their panel from the "Store" menu.

If you want to define products from the admin panel you have two options:

- To define in-house products (Products for the admin account), go to the "Admin panel/ Store/ In-house products" and click on the "Create a new product" button.
- To define products for other sellers, go to the "Admin panel/ Store/ New product" menu.

Users can define products from the "User Panel/ Store/ New Product" menu.

"New Product" wizard definitions

Product Types:

Physical: Products that require shipping.

Virtual products: Users will have access to these products after purchase like the Ebooks, licenses, etc.

Enable Ordering:

By enabling this toggle, the product status will be changed to "Out of stock" and users won't be able to order it while it has inventory.

Note: There are 4 additional fields for products in the admin panel for this step that allows admin to define different tax rate and commission rates for each product.

Inventory: Quantity of products that is available for sale. When this amount is reached, the product status will be changed to "Out of stock".

Inventory warning: When the product inventory reaches this amount, an inventory warning will be displayed on the product page.

Unlimited Inventory: By enabling this toggle, the product inventory won't be multiplied.

Specifications:

You can define product specifications from the "Admin panel/ Store/ Specifications". Product specifications will be displayed on the product page.

There are two types of specifications:

A- Multi-value: You can define these specifications from the admin panel with fixed values and allow sellers to assign them to their products. For example, you can define a specification with the title "Size" and parameters like "Small", "Medium", and "Large" so these options will be available for sellers when they create a product.

You can make the "Multi-value" specifications selectable for users by turning on the "Allow user selection" when you assign a "Multi-value" specification to a product. By enabling this toggle, you will let the user select the specification values during the ordering process. For example, the user will be able to select the "Small" option for the product.

B- Textarea: This specification type doesn't include any predefined data. It means users will be free for defining data for this specification type.

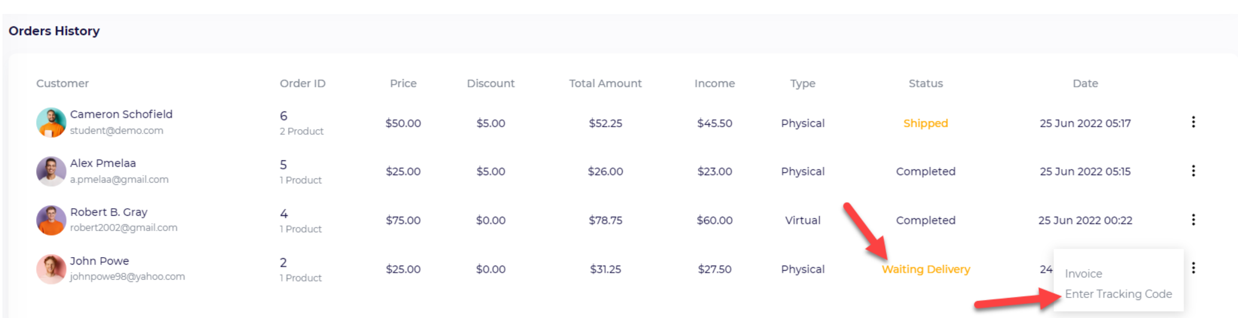
Product order process

Virtual products: The customer will pay for the product and will be able to access the content after payment is made successfully. The customer will be able to download the product if the seller enables the download option for the file or can view the file directly on the platform (This feature is available only for PDF and video files.

Physical products: The customer pays for the product and the order notification will be sent to the seller. The order status will be changed to "Waiting for delivery".

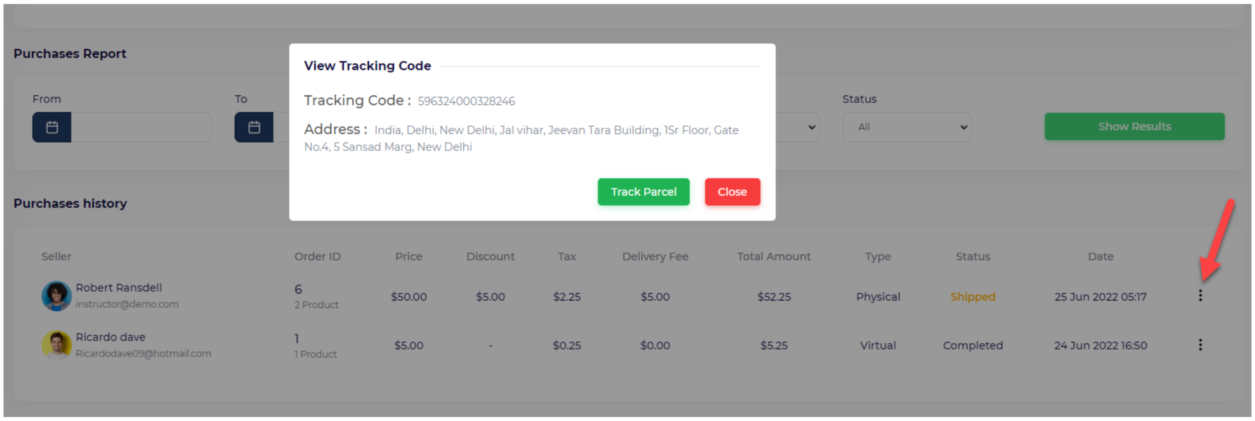
The seller will be able to view order details like the customer's address and needs to send the product using different shipping & curie solutions to the customer and will get the tracking code.

The seller needs to define the parcel tracking code for all "Waiting for delivery" orders from the "Store/ Sales" menu in the user panel.



By clicking on this option, a modal will be displayed and the seller can enter the parcel tracking code and confirm it. The order status will be changed to “Shipped” after submitting the tracking code.

The customer can view parcel details and the tracking code from the “User Panel/ Store/ My Purchases” menu.



When a customer receives a parcel, they need to go to the “User Panel/ Store/ My Purchases” and click on the “Parcel receive confirmation” and confirm receiving the parcel. The order status will be changed to “Completed” after this action.

Can customers purchase products using Points?

This option is available. The admin can define the “Required Points” value for each product. Users can purchase the product by spending a specific amount of points.

Forum & Community

The “Forum & Community” feature helps you to add a forum and user community to your platform.

A forum is a community that users can create topics in different categories and communicate with other community users. This feature will engage your users with your website and will increase the user’s online time on your platform. In addition, your platform users will create new pages, articles and content every day to your platform and it is very valuable for search engines and improves your website’s SEO ranking.

How to enable the forum feature?

You can enable this feature go to the “Admin Panel/ Settings/ General/ Features” and enable the “Forum” feature.

The forum feature will be accessible in the “yourdomain.com/forums” URL.

Forum main definitions

Topic: Contents that users create them inside forums.

Post: User replies to each topic.

Pin: The forum manager (Admin) can pin topics and posts and display them at the top of the list.

How to create new forums?

Go to the “Admin Panel/ Forums/ New” and create new forums and sub-forums with the following information:

Title: Forum title that will be displayed on the forum home page.

Description: Keep it short and describe the main subjects in the forum. It will be displayed at the bottom of the forum title on the forum page.

Group: Create a forum for a specific user group. Other user groups won't be able to view this forum.

Role: Create a forum for a specific user role. Other user roles won't be able to view this forum.

Active: If you disable this toggle, the forum won't be displayed on the front.

Close: By enabling this toggle, users won't be able to publish new topics or reply to topics.

If your forum includes sub-forums, check the related checkbox and add new sub-forums.

Featured/Recommended topics

You can assign existing topics to the Featured and Recommended sections. Both of these sections are on the forum home page.

We suggest defining 4 featured topics and 4 recommended topic groups with at least 5 topics in each group.

How to edit the forum CTA section

You can change the forum section in the home page from the "Admin Panel/ Settings/ Personalization/ Home Page Sections

Course Forum

This feature helps users to ask their questions in the course forum and other students and the course instructor will be able to answer questions.

The course forum is accessible only for the course students and instructors.

The question creator can mark the best answer as "Resolved". "Resolved" questions will be displayed with a particular badge.

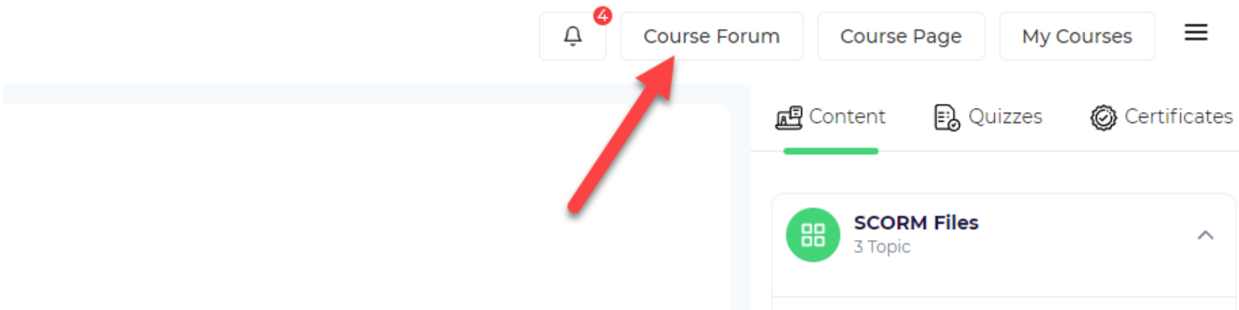
How to enable the feature?

You can enable this feature go to the "Admin Panel/ Settings/ General/ Features" and enable the "Course Forum" feature.

By enabling this toggle, the "Course Forum" toggle will be displayed in the course creation wizard and the course instructor will be able to enable/disable the forum feature for each course.

How to access the course forum?

Users can access the course forum feature on the learning page. The course forum button is on the "Top navigation bar".



Drip Content

The "Drip Content" feature makes the education process more effective. By using this feature you can restrict the user access to different course parts. Without using the drip content, the user will be able to access the course content without any limitations after enrollment.

If you use the "Drip" feature, you can force course students to access the content depending on the previous parts.

Drip content options

Rocket LMS drip content includes two options:

Sequence content check: By enabling this option for each course chapter or part, the user needs to pass the previous parts to access the content.

Time-depended access: You can define a limitation time for each course part so the user needs to wait "X" days from the purchase date to access the content.

How to enable the "Drip" feature?

Go to the "Admin Panel/ Settings/ General/ Features" and enable the "Drip Content" feature. By enabling this option, the course drip options will be displayed in the course creation process in the "Content" tab.

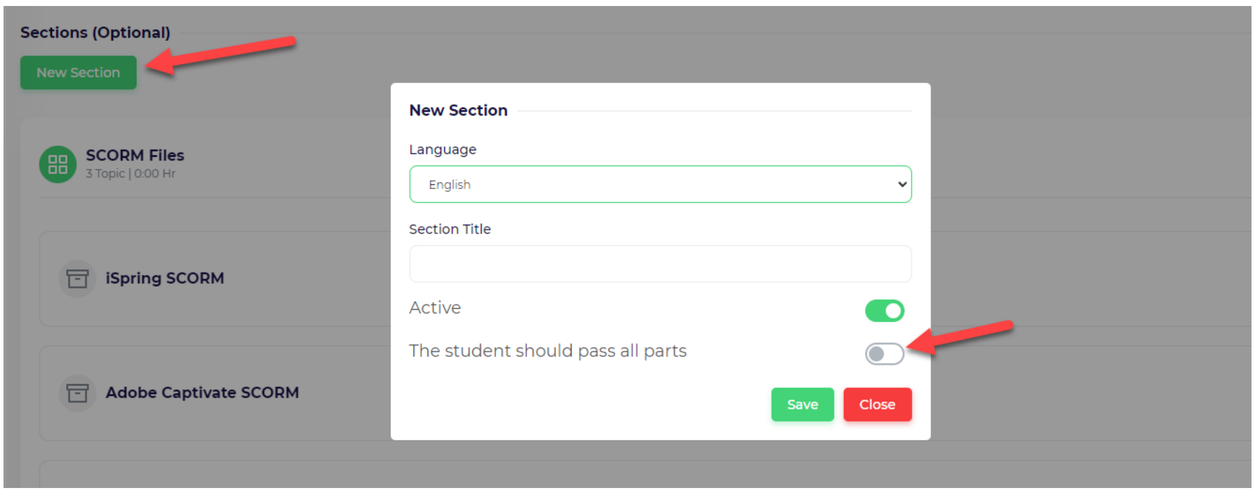
How to set the “Drip Content” options?

You can access the drip content features in the course creation wizard.

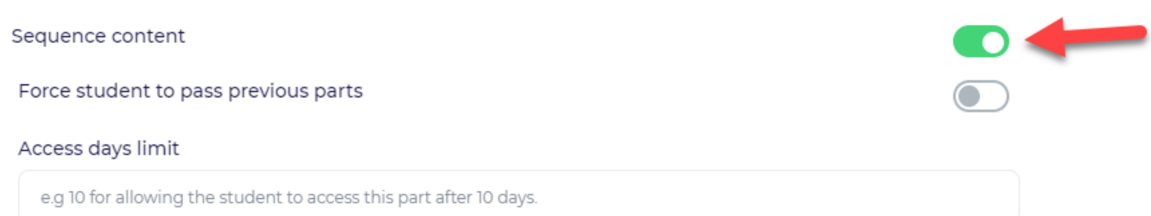
Option #1 – Chapter Pass:

When you create a course chapter, there is a toggle button “The student should pass all parts”.

By enabling this feature, the student should pass all chapter parts to access the next chapter.



To enable the content drip for each course part, you need to enable the “Drip content” for each desired part. In fact, the drip content feature will be enabled for each part by enabling this option. If you disable this toggle, this part will be ignored by the content drip. When you enable this toggle, you will have two following options:



Option #2 – Previous part pass:

If you enable this toggle for content, the user should pass the previous content (That the “Drip” feature is enabled for it) to access the current part.

Option #3 – Access days limit:

By filling in the related input, the user should wait “X” days after the purchase date to access the content.

Note: You can use one of these features or both of them.

Private Mode

Private mode allows you to restrict course enrollment and the course page. This feature is a good solution for using your platform as an internal LMS.

By using this feature you can:

- Restrict users from viewing the course page. Logged-out users won’t have access to the course page.
- Allow specific users to enroll on courses and access the course page. You can enable the course access for only your desired users.

How to enable the “Private Mode” feature?

Go to the “Admin Panel/ Settings/ General/ Features” and enable the “Private Mode” feature.

How to delegate access for users to access content?

If you enabled the “Admin approval for content access” you can specify which users can access courses content.

You can go to the “Admin Panel/ Access Management” menu. You will see all restricted users in this list and you can add or remove users to this list.

If you enable the “Admin approval for content access” toggle from the “Private Mode Settings”, all of the newly registered users will be displayed on this list after registration. They won’t have access to the content after registration.

You can also manage the user’s access by editing the user. Go to the “Admin Panel/ Users/ Select a user type/ Edit a user by clicking on the “Edit” button in the last column. There is a toggle in the first tab with the title “Disable Content Access” by enabling this toggle, the user’s access to the course page will be restricted.

Course Statistics

You can view the course statistics and analytics using this feature. This feature gives you valuable insights about the course content and students in a graphical environment so you can analyze the course learning efficiency easily.

How to view the course statistics page?

Admin Panel: Go to the courses list; in the last column, click on the dots icon and click on the "Course Statistics" option.

User Panel: This feature is available for instructors and organizations. Go to the courses list and click on the dots icon and click on the "Course Statistics" option.

Manual Enrollment

By using this feature the admin can add or remove users to courses, bundles, and store products.

How to use the "Manual Enrollment" feature?

You can add students to courses manually from the "Admin Panel/ Enrollment/ Add a student to a course" menu. Select a user and course and give access to the course easily.

If you want more features (Like adding users to bundles and store products), you can go to the "Admin Panel/ Users/ Select a user type/ Edit a user by clicking on the "Edit" button in the last column.

There are 3 tabs "Purchased Courses", "Purchased Products", and "Purchased Bundles". You can add or remove users to different content types from these three tabs.

Course Bundles

By using this feature you can combine several courses as a bundle. When a user purchases a bundle, they have access to all of the included courses.

How to create new bundles?

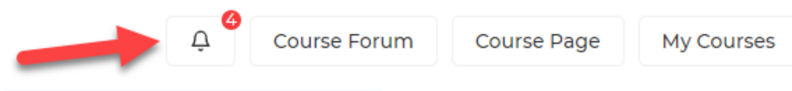
Instructors and organizations can create bundles from the "User Panel/ Course Bundles/ New" and the admin can create bundles from the "Admin Panel/ Course Bundles/ New" menu.

The bundle creation process is similar to the course creation process. Users can assign courses to a bundle in the 4th step.

Note: The "URL" and "Required Points" fields will be displayed on the admin panel additionally. The admin can change the bundle URL and specify required points for the bundle so users will be able to purchase the bundle using reward points.

Course Notices

Admin and instructors can post notices for courses and these notices will be displayed on the course learning page. Users can access course notices by clicking on the "Notices" icon.



How to post new notices?

Admin Panel: Go to the "Admin Panel/ Course Notices/ New" menu, select a title, notice color depending on the notice context and write the notice content and click on the "Send" button.

User Panel: Go to the "User Panel/ Noticeboard/ New course notice" menu, select a title, notice color depending on the notice context and write the notice content and click on the "Send" button.

Course Assignments

Create different assignments for the course and evaluate your course students learning quality.

How to create new assignments for courses?

The instructor can define assignments for a course from the “Content” tab in the course creation process with the following values:

Grade: Total grade of the assignment.

Pass Grade: If the student reaches this grade, the assignment status will be changed to “Passed”.

Deadline: How many days is the student allowed to submit the assignment? If you set 5, the user is allowed 5 days from the purchase date to submit the assignment. Once the deadline passed, the student won’t be able to submit the assignment.

Attempts: How many times the user can resubmit the assignment? If this value is reached, the user won’t be able to resubmit the assignment. Each message that the student sends to the assignment’s conversation, will decrease one of the attempts.

Attachments: You can attach examples, documentation, or any other assets to each assignment.

How can the student access the assignment?

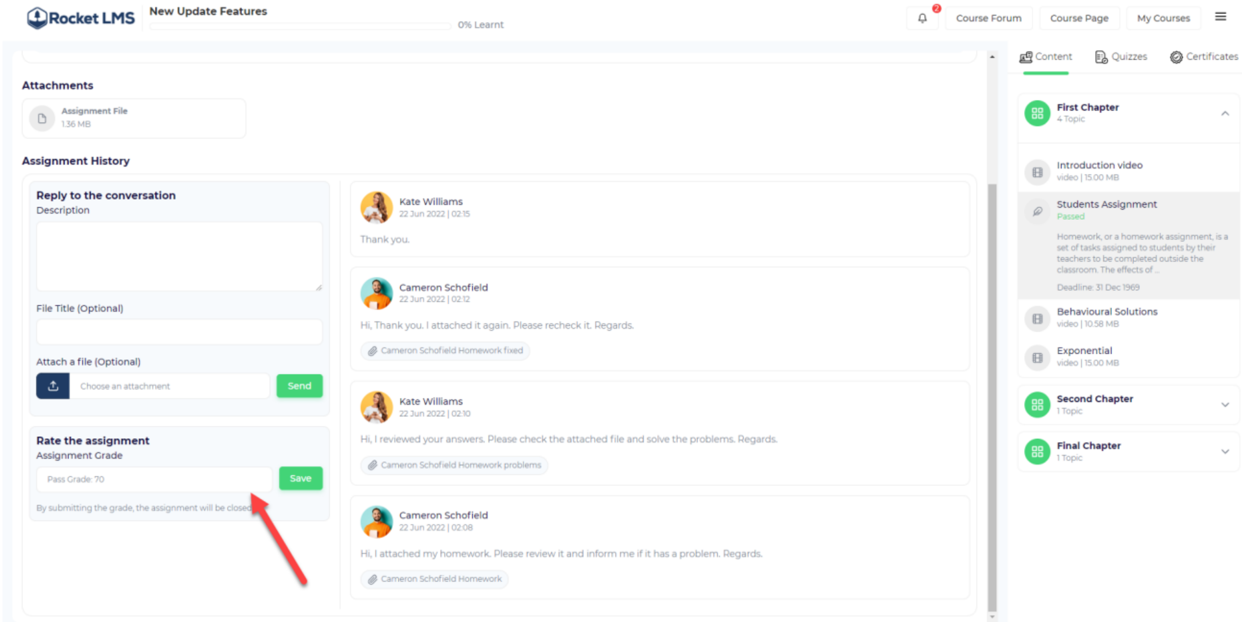
The student can access the assignment on the learning page or “User Panel/ Assignments/ My Assignments”.

Each assignment includes a conversation between the student and the instructor including messages and file history.

How can the instructor access the assignment and rate it?

The instructor can access the assignment on the learning page or the “User Panel/ Assignments/ Students Assignments” menu.

When the instructor opens the assignment page, can review the assignment, ask questions from the student, send improvements or rate the assignment.



If the instructor rates an assignment, the assignment status will be changed depending on the assignment grade. If the assignment grade is greater than the passing grade, the status will be changed to “Passed”.

HOW TO GET SUPPORT?

This bundle supports free installation. You can ask us in [CRM] to install it for you for free.

You can also get the latest updates directly in CRM.

You can get the full package (Includes Rocket LMS and Plugins bundle) from CRM. By using this package no need to install plugins separately.

Note:

You can use the .env file that exists in the plugins bundle package. It includes all of the required configurattions.
